EDUCATION

Kansas State University

Bachelor of Science, Computer Science

• Coursework: Data Structures, Database Design, Computer Systems Architecture, Linear Algebra

May 2027
Manhattan, KS

SKILLS

- Languages & Frameworks: Python, SQL, JavaScript, TypeScript, Java, React, Flask, Node.js, Swift, SwiftUI, HTML/CSS
- Data Engineering & Analytics: ETL workflows, data pipelines, data cleaning, product analytics, Pandas, NumPy, feature engineering
- Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Jenkins REST APIs, cloud native tools
- Databases & Tools: SQL, database design, Streamlit, Git, OAuth, JIRA, N8N Automation, Agile/Scrum, analytical thinking

WORK EXPERIENCE

Textron Aviation | *Incoming Information Systems Developer Intern*

Jun 2026 to Aug 2026

- Selected for a 10 week developer internship supporting software, data, and enterprise systems initiatives for aviation operations
- Will build internal applications and reporting workflows that connect business data sources and improve operational visibility
- Will collaborate with technical and business teams to translate requirements into reliable database, web, and automation solutions

JNT Company | *AI Web Development Intern*

May 2025 to Jun 2025

- Built internal data and reporting tools using React, Flask, Python, Pandas, and NumPy to transform raw operational data into dashboards
- Developed backend validation logic and API integrations that cleaned, structured, and exposed reporting data for product analytics workflows
- Optimized API and frontend performance through profiling and refactors, cutting response times by 30% for analytics use cases
- Containerized services with Docker and automated build and deploy pipelines to AWS, enabling reliable delivery across environments

Student Support & Accountability Center, Kansas State University | *IT Support Representative*

Jan 2024 to Present

- Resolved 90% of technical issues on first contact while supporting 200+ students per month across email, phone, and in person channels
- Designed standardized diagnostic workflows and issue tracking notes for recurring technical problems, reducing resolution time by 40%
- Authored SOPs and onboarded 3 new technicians, improving knowledge sharing, service reliability, and repeatable support processes

PROJECTS

SchedAI, AI Powered Scheduling iOS App

[GitHub](#)

- Implemented input processing pipeline in Python using spaCy and NLTK to convert free form text and voice input into structured task records
- Designed task schema and constraint aware planning engine that organizes deadlines, work windows, priorities, and notification triggers
- Built reusable data flow from parsed inputs to Apple Calendar sync, supporting reliable downstream scheduling and automation logic
- Built end to end CI/CD for iOS with automated unit and integration tests, improving release reliability across device workflows

FIFA 2026 World Cup Score Predictor

[GitHub](#)

- Cleaned and preprocessed 49,071 international match records using Pandas and NumPy, engineering features from Elo and FIFA ratings
- Built ETL style preprocessing workflow to support repeatable feature updates, training runs, and analytics dashboard refreshes
- Developed model evaluation pipeline for Logistic Regression and Poisson regression with cross validation and performance benchmarks
- Packaged Streamlit dashboard in Docker to expose Monte Carlo forecast probabilities and advancement odds through an analytics workflow

Voice Preserve AI Editing Platform

[GitHub](#)

- Built Next.js/TypeScript app with PostgreSQL/Prisma, Redis/BullMQ worker, Docker Compose infrastructure, and Playwright/Vitest tests
- Implemented secure session cookies, CSRF checks, upload validation, rate limiting, privacy deletion workflow, and deployment notes
