EDUCATION

Kansas State University

May 2027

Majors: Management Information Systems and Artificial Intelligence

Manhattan, KS

Minor: Computer Science | **Coursework:** Data Structures, Computer Systems Architecture, Database Design, Linear Algebra

SKILLS

- **Product and Strategy:** product requirements, roadmap prioritization, customer research, tradeoff analysis, launch readiness, Agile/Scrum
- **Analytics and Operations:** SQL, Pandas, NumPy, scikit learn, model evaluation, dashboards, KPI analysis, workflow optimization
- **Technical:** Python, Java, TypeScript, JavaScript, C#, Swift, REST APIs, Web APIs, system design, debugging
- **Platforms and Quality:** React, Next.js, Flask, SwiftUI, PostgreSQL, Redis, Docker, unit testing, integration testing, Playwright, documentation

WORK EXPERIENCE

Textron Aviation | Information Systems Developer Intern, Applied Intelligence

Jun 2026 - Present

- Owned an AI assisted internal product from ambiguous stakeholder requirements through delivery, replacing 2 manual workflows with .NET 10, Blazor, and Web API generation and search experiences.
- Coordinated a 7+ layer implementation across frontend views, API clients, controllers, business services, data access, shared models, and navigation while balancing user experience and maintainability.
- Designed search and generation flows that present 8+ key fields with clear validation states, helping users investigate incomplete or mismatched records faster.
- Improved launch readiness with 15 passing backend tests, input validation, safer configuration, stakeholder documentation, and maintainable handoff notes.

JNT Company | AI Developer Intern

May 2025 - Jun 2025

- Built and integrated AI chatbots into client websites with React, Python, Flask, JavaScript, and REST APIs, translating business content and customer needs into support workflows.
- Improved chatbot and web application response times by 30% by profiling bottlenecks, prioritizing high impact fixes, and coordinating frontend, backend, and API changes.
- Improved answer relevance through prompt and context iteration, validation, fallback responses, stakeholder feedback, and technical documentation for client handoff.

Kansas State University | IT Support Representative

Jan 2024 - Present

- Resolved 90% of technical issues on first contact for 200+ students per month by listening to user needs, diagnosing root causes, and communicating clear next steps.
- Reduced issue resolution time by 40% by standardizing diagnostic workflows and support notes, then onboarded 3 technicians on troubleshooting and escalation.

PROJECTS

World Cup 2026 Predictor, Data Product | *Python, CatBoost, Parquet, Streamlit*

- Shaped prediction models and Monte Carlo simulations into a 5 page Streamlit product covering overview, team odds, group winners, match predictions, and knockout brackets.
- Built a reproducible Python pipeline for validation, feature engineering, time based evaluation, model metadata, and automated updates, supported by tests for data and tournament logic.
- Built inference outputs for win, draw, and loss probabilities with predicted scores to support clearer model comparison.

SchedAI, iOS App | *SwiftUI, WidgetKit, EventKit, UserNotifications*

- Designed a customer centered planning experience that turns typed or spoken requests into tasks, work windows, fixed time events, flexible priorities, and a clear daily timeline.
- Delivered reminders, Apple Calendar sync, a home screen widget, and an offline parser so core planning remains reliable when the optional AI service is not configured.
- Built fixed and flexible scheduling rules that prioritize work by time and urgency, reducing manual planning.

VoicePreserve, AI Workflow Product | *Next.js, TypeScript, PostgreSQL, Redis, BullMQ*

- Defined a 10 step user workflow from project creation and document upload through voice profile generation, rewrite review, semantic drift warnings, transparency reports, and queued exports.
- Designed 7 modular services and 10 PostgreSQL entities to support provider integration, background jobs, review controls, privacy workflows, and full stack delivery.
- Added semantic drift warnings, secure sessions, validation, rate limiting, and Vitest and Playwright coverage.
