EDUCATION

Kansas State University

Bachelor of Science, Computer Science

May 2027
Manhattan, KS

- Coursework: Data Structures, Database Design, Computer Systems Architecture, Linear Algebra

SKILLS

- Languages & Frameworks: Python, SQL, JavaScript, TypeScript, Java, React, Flask, Node.js, Swift, SwiftUI, HTML/CSS
- AI/ML & GenAI: Machine Learning, Data Science, scikit-learn, Pandas, NumPy, PyTorch, NLP, LLM integration, OpenAI API
- Applied AI: Generative AI, AI agents, Retrieval Augmented Generation (RAG), prompt engineering, model evaluation, model tuning concepts
- Cloud Native & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Kubernetes, GitHub Actions, CI/CD, REST APIs, Linux, MCP server concepts
- Other: Git, Streamlit, Agile/Scrum, OAuth, JIRA, N8N Automation, analytical thinking, microservices concepts

WORK EXPERIENCE

Textron Aviation | *Information Systems Developer Intern*

Jun 2026 to Aug 2026

- Selected for a 10 week developer internship supporting software, data, and enterprise systems initiatives for aviation operations
- Will help build internal applications, reporting workflows, and automation tools that turn business data into decision support systems
- Will collaborate with technical and business teams to translate requirements into reliable database, web, and AI ready automation solutions

JNT Company | *AI Web Development Intern*

May 2025 to Jun 2025

- Built internal data and reporting tools using React, Flask, Python, Pandas, and NumPy to transform raw operational data into dashboards
- Developed backend data validation logic and API integrations that cleaned, structured, and exposed data for analytics and ML ready workflows
- Applied feature engineering and model evaluation practices to improve reporting quality, data accessibility, and decision support
- Containerized services with Docker and automated build and deploy pipelines to AWS for repeatable delivery across environments

Student Support & Accountability Center, Kansas State University | *IT Support Representative*

Jan 2024 to Present

- Resolved 90% of technical issues on first contact while supporting 200+ students per month across email, phone, and in person channels
- Designed standardized diagnostic workflows and issue tracking notes for recurring technical problems, reducing resolution time by 40%
- Authored SOPs and onboarded 3 new technicians, improving knowledge sharing, service reliability, and repeatable support processes

PROJECTS

SchedAI, AI Powered Scheduling iOS App

[GitHub](#)

- Built an AI powered scheduling assistant that converts natural language and voice input into structured task records for planning automation
- Implemented NLP extraction pipeline using Python, spaCy, and NLTK with schema design for agentic scheduling and retrieval workflows
- Designed constraint aware planning logic that prioritizes tasks based on deadlines, work windows, user context, and task dependencies
- Built end to end CI/CD for iOS with automated tests, Apple Calendar sync, and notification workflows for reliable app delivery

FIFA 2026 World Cup Score Predictor

[GitHub](#)

- Cleaned and preprocessed 49,071 international match records using Pandas and NumPy, engineering Elo and FIFA rating features
- Built reproducible model evaluation pipeline for Logistic Regression and Poisson regression using cross validation and benchmarks
- Created repeatable preprocessing and model tuning workflow to support feature updates, training runs, and analytics dashboard refreshes
- Packaged Streamlit dashboard in Docker to expose Monte Carlo forecast probabilities and advancement odds through an interactive workflow
